Mumbai, Maharashtra, India — sanchitmohite15@gmail.com — +91-9987547734 — LinkedIn — GitHub — LeetCode — Portfolio

## Professional Summary

Backend engineer specializing in Java, Spring Boot, and distributed systems, with hands-on experience building payment workflows, caching layers, and search-driven services under real production load. Comfortable across the full backend lifecycle – API design, containerized deployment with Docker, CI/CD pipelines via GitHub Actions, and cloud hosting on AWS – with a focus on reliability, latency, and maintainability at scale.

## Technical Skills

**Languages:** Java, JavaScript, TypeScript, Python, SQL, C, PHP (basic)

**Frameworks:** Spring Boot, Spring Security, Hibernate/JPA, React.js, TailwindCSS, FastAPI

**Architecture:** Microservices, REST APIs, MVC, Clean Architecture, Agile/Scrum

**Databases:** MySQL, PostgreSQL, Firebase Firestore, Redis

**DevOps & Cloud:** Docker, Git, GitHub, GitHub Actions (CI/CD), AWS (EC2, S3), OCI

**Messaging & Monitoring:** Kafka, RabbitMQ, Prometheus, Grafana

**Security:** JWT, Firebase Auth, BCrypt, OTP, RBAC, OWASP Top 10, Vulnerability Assessment

**Cybersecurity Tools:** Nmap, Wireshark, Burp Suite (basic), Nessus (basic)

**Testing & Tools:** JUnit, Mockito, Postman, Elasticsearch, Kibana

**AI & Data:** RAG, Basic ML Concepts, Model Integration, Data Preprocessing

## Work Experience

### Software Development Summer Intern

June 2026 – Aug 2026

*E4Softwares*

- Designed and delivered 12 production-grade RESTful APIs in FastAPI, accelerating procurement workflows for the client.
- Engineered multi-layer input validation and authentication, cutting the API error rate by ~30%.
- Converted APIs into MCP-based tools for natural language querying, enabling future LLM and RAG integration.
- Streamlined data retrieval and request handling to lower average API response time.
- Authored API documentation and Postman test suites, accelerating cross-team debugging.

### Software Development Intern

June 2025 – Nov 2025

*Seoulux Technologies*

- Owned end-to-end delivery across multiple live products, including *Career Advance* and *Mystery Rooms*, from build to release.
- Developed backend APIs in Java, Node.js, and Spring Boot, plus responsive UI in React and TypeScript.
- Integrated AI-driven workflows, including a resume checker/builder tool, boosting user engagement by 15% across the platform.
- Deployed Spring Boot services to AWS EC2 with JWT authentication and MySQL as the data store.
- Reduced API latency by ~50% and resolved recurring production bugs across projects.

## Projects

### Evenza – Full-Stack Event Management System

GitHub

- Architected a microservices-based event booking platform in Spring Boot with admin dashboards and RBAC.
- Integrated Razorpay payments with refund workflows and idempotency handling for concurrent transactions.
- Cut seat-check latency by ~40% using Redis caching, with seat-blocking and row-level locking validated under real concurrent-booking tests.
- Secured the platform with JWT authentication, Spring Security, Docker deployment, and JUnit-tested services.

### Corporate Digital Library (CDL)

GitHub — Live Demo

- Built a secure document management platform with role-based access control and automated S3 backups, reducing data-loss risk.
- Delivered fast full-text search via Elasticsearch indexing, hitting 150–200ms response times over a 10k+ document index.
- **Tech:** Node.js, Elasticsearch, React, MySQL, AWS S3, Docker

### AI CFO – Financial Intelligence Platform

GitHub — Live Demo

- Designed an AI-powered financial platform for forecasting, anomaly detection, AR automation, and CFO assistance.
- Powered forecasts with GPT-based RAG workflows across payroll, investor reporting, and cash-flow prediction, reaching ~97% accuracy.
- **Tech:** Python, FastAPI, RAG, OpenAI, React, Docker, PostgreSQL

### GST Agent Environment – AI GST Reconciliation

GitHub — HuggingFace

- Designed an AI-driven GST reconciliation platform using multi-agent systems and reinforcement-learning concepts.
- Cut reconciliation time from days to minutes via RAG pipelines with deterministic validation.
- Deployed FastAPI services with async operations, semantic caching, and Docker-based infrastructure.
- **Tech:** Python, FastAPI, GPT-4, RAG, Docker, HuggingFace, RL

## Education

### K. E. S. Shroff College of Arts & Commerce

Sept 2025 – Present

*Master of Computer Applications (MCA)*

### Hinduja College of Commerce & Economics

Sept 2022 – June 2025

*Bachelor of Computer Applications (BCA)*

GPA: 7.5

## Certifications

**Java Programming** (Certificate)

**SQL Certification** (Certificate)

**Web Development** (Certificate)

**Git Fundamentals** (Certificate)

**OCI Foundations Associate** (Certificate)

**AWS Hackathon 2024** (Certificate)
